So lets see what would happen if doing such a thing Softmax和交叉犄角的求多生程 $y_i = \frac{e^{\alpha_i}}{\sum_{k} e^{\alpha_k}}$, where k = 1, ..., KSoftmax Softmax的性质(代码时便用) 由于softmax中海用了指移运算,即已能运算、财友使用softman时 基础成础过大,即在numpy中可能会出现inf的结果.inf是我们不要看到的,因为会会只很多信息。所以要想由波向了决定一问题。 SOFT Max 为一条重要中售房里 SOFT Max (Qi) = SOFT max (Qi+C), 其中C为经产品 coding By Tomas Total & Bot 值以达到给比过到 RP C= max (a) softmax (a;) = softmax (ai - max(a) E Car Softmax No st Sit to $\frac{(e^{a_i}) \rightarrow g(a_i) = g_i}{\sum_{k} e^{a_k}} f' = \frac{1}{k}$ 此时会出现两种情况,即当注意和为这样了时。 の方に三月かま $= y_i - y_j^2$ ②当主到时

Cross Entropy (交叉輪)的就等过程 其中, Yi 为 softmax TE 表现的结果, label 和真家作品(ground truth), Log 的振数的电, 为了方便求量 叶子softmax的新入及南至,(这里的众是是了曲行历台) $\frac{\partial L}{\partial O_k} = \frac{\partial L}{\partial y_k} \cdot \frac{\partial y_k}{O_k}$ $\frac{\partial L}{\partial y_k} = \frac{\partial}{\partial y_k} - \frac{\sum_{k=0}^{\infty} Label_k \cdot log(y_k)}{\partial y_k}$ $= -\sum_{k} label_{k} \cdot \frac{\partial log(y_{k})}{\partial y_{k}}$ = - \(\tabel_k \cdot \frac{1}{\tau_k} \) 由前面得到的softmax求好多果可知 $\frac{\partial L}{\partial o_k} = -label_i (1-y_i) - \sum_{k \neq i} label_k \cdot \frac{1}{y_k} (-y_k \cdot y_i)$ = - label; + label; y; + \(\subset \) label, \(\text{y} \); = - label; + y: (label; + \(\) label; \(\) = - label; + y: [label] - Tone-hot encoding

= - label; + y: [label] - Tone-hot encoding

= y: - label; = yi- labeli 最終課題 cross-entropy + softmax 5:gmoid & Eg $\sigma(n) = (1+e^{-n}) \rightarrow u(n) \rightarrow u$ $\sigma'(x) = \frac{\partial G(x)}{\partial x} = \frac{\partial \sigma}{\partial u} \cdot \frac{\partial u}{\partial x}$ $\frac{-e^{-x}}{(1+e^{-x})^2}$ $=\frac{1+e^{-1}}{(1+e^{-x})^2}$ $= \sigma(x) \left(1 - \sigma(x) \right)$
